SpaceY Corporation

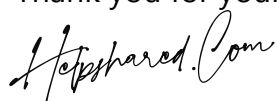

Dear Dr. Pratchett,

I'm writing to express my interest in the cybersecurity analyst position with SpaceY Corporation as listed on spacejobs.com. I am an experienced cybersecurity professional with five years of experience protecting critical information and securing large and mobile networks.

In my current position with Late Techtonics, I work closely with the cybersecurity team to keep proprietary information secure, applying extensive knowledge of networking and malware. As the Device Security Lead with the R&D team, I have enacted a rigorous cloud security plan to fortify laptops, portable mass storage devices and phones on WiFi networks globally. I prioritized communication and collaboration within our team, which enabled us to respond promptly to threats and prevent several competitor hack attempts. I have the Certified Ethical Hacker and E-Council Security Analyst certifications.

I believe my career focus on securing proprietary research during travel has prepared me to help your team protect the vital research that SpaceY is doing. I can bring years of debugging and travel support experience as SpaceY develops its new facility in Houston, and have experience building new cybersecurity protocols for servers and personal devices. I have followed the SpaceY project since its inception in 2008, and am thrilled at an opportunity to contribute to your inspiring mission and innovative team. Please find my resume attached. Thank you for your time and consideration.

Thank you for your consideration,
